

# Vertical leap

An Navi Mumbai based firm has been at the forefront of offering top notch customised solutions across the country in high rise space.

The arrival of glass buildings in the Indian subcontinent with attractive façades and costly exteriors created a new and unique business opening for their installation maintenance and cleaning.

That is how Simple Engineering Solutions came into being. The company established in 2002 carries the objective of becoming the most sought after firm in the areas of access engineering and vertical transportation solutions by 2025.

Simple Engineering Solutions is a group of first generation technocrat-entrepreneurs with considerable experience in modern concepts and best practices in the machine building industry. The company as part of its business offers services related to building façade, window cleaning, access or Gondola systems and equipment, building maintenance units and suspended platforms called Cradle. It is basically a one stop shop for construction, installation work & façade maintenance needs.

The company is run by a team of professionals and engineers who provide every service in access engineering under one roof, right from the concept stage to commissioning and tailormade to project

Siraj Dalvi, MD

requirements and within budget.

The company offers the following:

- Turnkey projects
- Consultancy
- Annual Maintenance Contract
- After-sales service
- Modernisation/renovation of equipment
- Repair/reconditioning of equipment

The company follows international standards for design, engineering and manufacture. Equipment components are treated with special anti corrosive surface treatment and stainless steel components are used in critical areas for an uneventful long service life.

- Elevator industry
- Emergency evacuation

With its operational approach characterised at every stage by inbuilt safety, productivity and value for money solutions for customers through quality assurance inbuilt, Simple Engineering Solutions has been able to grow in a short time. That fact is reflected in the growing list of satisfied customers.

Some of the orders received by the company were really of a critical and complicated nature owing to the shape and contour of the pre-designed buildings. Yet the company was able to provide comprehensive access solutions.

Simple Engineering Solutions is being patronised by corporates, MNCs, banks, and reputed builders who constitute a major chunk of its clientele.

The company can today lay claim cleaning some of the most difficult buildings in India with the equipment designed by it. Its technical expertise, specialisation and experience of more than a decade using various kinds of equipment, is its strength. In a very short period it has changed the total complexion of the façade access industry with clients getting value for their money. Since the nature of the job is very specialised, there are very few companies that offer products and solutions – there is virtually very little competition – that can match up with those offered by Simple Engineering Solutions.
